

Ottobock

Integrated Services

SNAPSHOT

Cresa led the strategic planning process by analyzing Ottobock's existing facilities and working with the executive team to rationalize North American operations. The national site selection process included a labor, logistics, and economic incentives study, and validated a relocation from Minnesota to occupy a new build-to-suit headquarters in Texas. Cresa also worked closely with the architect, general contractor, and city officials to ensure that the project finished on time and within budget.

Cresa also provided integrated services for Ottobock's new distribution center in Louisville, KY and the renovation of their Salt Lake City, UT manufacturing facility.
